Resilient design solutions
that respond to specific
site considerations.

UC Irvine Mesa Court
Irvine, California

Architectural Specialist Division

We are a team of qualified design professionals with a strong background in landscape architecture. With 50+ years of experience in successful collaboration through an orchestrated approach to design, we partner to smoothly and efficiently integrate customized fabric structures into your projects.

Conceptual Design & Sales Engineering

The fundamental first step in our process is to develop a scope definition and devise preliminary engineering analysis of the project.

Project Design & Engineering

We establish the geometry, 3D-model the structure, develop design drawings and engineering calculations, then submit to the client.

Project Management

Our Project Managers utilize customized organizational software to ensure all of our projects are completed in the most cost-effective, timely, and efficient manner.

Fabrication

Our IAS Certification verifies that our quality of welding and steel fabrication practices meet International Building Code (IBC) standards.

Construction & Installation

We coordinate the construction process and facilitate operational efficiency. Our expert construction teams have many years of experience in foundation and footing construction, steel erection, and fabric installation.

Design + Build Process

Beginning at the initial design development stage, we collaborate with design professionals to provide continuity of the project and ensure its success. We partner with our clients to offer world-class solutions, from conceptual site impacts all the way through assistance with construction documents.

Meaningful Placemaking for Outdoor Experiences

The Sound
Coppell, Texas
